

Microsoft SQL Server Consultancy Services

Our Consultancy Services are geared to help you identify security vulnerabilities, efficiencies, improvements and enhancements in Microsoft SQL Server which will help your business make more informed, strategic decisions to accelerate your technology journey.

Delivered by a team of Microsoft SQL Server Experts with years of experience across a wide range of customers, they have the insight into different needs and requirements across a multitude of application landscapes to ensure a positive outcome – no matter the starting point.

Our consultancy includes

Database Review

Full and comprehensive review of the entire database estate, based on best practices and industry experience and expertise. Followed by a full report and advisory

Security Review

A detailed security review, based on best practices and known security vulnerabilities in the SQL estate and related components

Cost Optimisation

Experts review your application landscape and configuration to understand the requirements and advise on cost optimisation opportunities

Performance Review

Application improvements, resource usage and more are part of our SQL estate performance review to optimise your environment
