

Chief Information Security Officer as a Service

A Chief Information Security Officer will ensure that your Information Security Risk Management program is managed effectively and aligned to industry best practices and internationally recognised standards. The central responsibility of the CISO role is to reduce the overall level of cyber risk within the organisation to an acceptable level. The CISO will also accurately determine and measure your organisation's Cybersecurity posture and present results and recommendations to your board or other agreed-on internal audiences.

Cyber Security Risk Management

Risk management is at the core of all common Information security frameworks. Our assigned CISO can develop an effective risk management methodology. This will allow you to identify critical business functions, dependant risks, and the technology assets that support them.

Regulatory Compliance

Several new EU cyber security regulations entered into force recently including, NIS 2 MICA and DORA. Our assigned CISO can assist your internal team in developing compliance programs for all major EU regulations.

Business Continuity Planning

Organisations must ensure that they have plans in place to ensure they can continue to deliver their services in the event of a disruption. Our assigned CISO can help to develop and test your BCP and DR plans to ensure they achieve the objectives required by the business.

Management of Third-Party Risk

Organisations must monitor risks posed by Third Party suppliers on an ongoing basis Our assigned CISO can assist your internal team in developing vendor management programs to ensure your third-party risks are minimised.

Cyber Security Strategy

Defining an appropriate cyber security strategy is critical to ensure the that your cyber security budget and resources address the areas of greatest risk to your organisation. Our assigned CISO can assist your team in developing an appropriate strategy which efficiently addresses your digital transformation requirements
